

Businesses today need to have the right tools to help them build and maintain increasingly complex applications that map to their unique business processes.

Enterprises rely on new technologies to expand business capabilities and develop entirely new business opportunities. While IT organizations once played a supporting role, they now are essential to the development of most business strategies.

The delivery of complex applications requires multi-disciplined teams. During any major development project, proper communication is fundamental for success.

The new Visual Studio Team System (VSTS) expands Microsoft's development suite by offering tightly integrated and extensible life-cycle tools that drive business success.

Our *Get Results* program provides the tools your development team needs to reduce complexity and improve communication.

#### **CUSTOMER PREREQUISITES:**

- At least one server-class machine
- Domain accounts for VSTFS (3 accounts), unless configured in workgroup mode

#### **CUSTOM APPLICATION DEVELOPMENT TIMELINE:**

2 WEEKS OR 80 HOURS • Call today for special pricing.

## 01 **NEEDS ANALYSIS**

We interview project stakeholders to kick off the selection process, select a target project and conduct administrator training.

## 02 **DELIVERABLES**

To get you started with VSTS, we:

- Convert a Visual Source Safe project to VSTFS
- Migrate existing team members into VSTFS
- Convert a project solution into a VSTFS project
- Set-up a Build-of-the-Day process
- Create a team portal site and initial test projects for your application

## 03 **ADMINISTRATIVE TRAINING**

We provide administrators with one-day training on project initialization, user and portfolio management, report creation, extension points for VSTFS, and working with source code policies.

## 04 **DEVELOPER TRAINING**

Development team members receive two-days of training on using the project portal, managing work items, and understanding VSTS projects. We demonstrate VSTS team development features, how to work with source code policies, developer migration from Visual Source Safe to VSTS, and authoring and using testing features offered by VSTS.
